QuickPoll

[Infiltration concept \(ICON\)](#)

Infiltration concept (ICON) is a relatively new treatment for arresting the progression of incipient carious lesions using low viscosity unfilled resin without using a drill, anesthesia, or removal of sound tooth structure. Some [clinical trials](#) have shown that ICON is effective in arresting the progression of incipient carious lesions and in [masking post-orthodontic and other cariogenic white spot lesions](#) in a single visit.

Please respond to the [5-question poll](#) regarding ICON.
