QuickPoll

Mental Health of Patients

Risk factors such as alcohol abuse, mental health disorders and chronic pain can be identified during the health history review. Clinical depression in particular is one of the most common mental health disorders. Its impact on society may be underestimated because depression often accompanies other medical problems thereby increasing the likelihood that it will be downplayed or overlooked.

Please take a few moments to complete this [5-question quick poll](#) to help us gather information on your practices regarding the mental health of your patients.
