QuickPoll

How often do you prescribe opioid analgesics to manage post-procedural pain?

Recent national attention has been given to the role of providers in helping to combat the prescription opioid misuse epidemic. Dentists prescribe more than one out of every ten immediate release opioids dispensed, but there have been very few efforts to provide dentists with the information and training needed to implement risk mitigation strategies when prescribing opioids.

Please complete the 5 question poll regarding your experiences with prescribing opioid analgesics.

Thank you for taking the time to respond. We will keep you posted about the results of the quick poll. Your response will help determine whether to consider this for a network study.

Poll closes November 5th!

To access the poll, go to "Opioid Analgesics Quick Poll" under Quick Links on the left hand side of this email.
