Color in Dentistry

Providing treatment to patients by restoring their dentition to proper function and occlusion may be a daunting task. Yet, we also need to restore the tooth to its natural appearance and optical properties.

Understanding the color and translucency properties of the natural tooth is essential, along with the optical properties of the material to be used, including how these materials behave under a specific light source.

Please respond to the [5-question poll](#) regarding color in dentistry. We will keep you posted about the results of the quick poll. Your response will help determine whether to consider this for a network study.
